

Datasheet for Watermelon

Sunergist® EBR (24-Epibrassinolide 0.01% SL)

Spray Sunergist® EBR will help watermelon to reduce the transplant shock, enhance the fruit set and uniformity of development.

Suggested Use Direction

- 1st spray - Petal fall (30% of the flowers dropped) at 1.2 fl. oz / 20 GPA
- 2nd spray - 7-10 days after the first spray with 1.2 fl. oz / 20 GPA
- Repeat twice, 7-14 days after 2nd spray

Note: Nonionic surfactant (NIS) must be used.

Benefit to Growers

- Ensure the watermelon set
- Enhance the uniformity of watermelon size and even ripening

Please read label before use:
